Permutrees

The permutrees are combinatorial objects which encode those lattice congruences. They interpolate between permutations, binary trees and binary sequence.

→ V. Pilaud, V. Pons. Permutrees. *Algebraic Combinatorics* (2018).

The Permutree Recipe

- ▶ Take a word in $\{\oplus, \ominus, \otimes, \oslash\}^n$
- ▶ Take a permutation
- ▶ Do the insertion: get a Leveled Permutree (bijection)
- ▶ Remove the levels: get a Permutree (surjection)

The Permutree Recipe

- ▶ Take a word in $\{\oplus, \ominus, \otimes, \oslash\}^n$
- ▶ Take a permutation
- ▶ Do the insertion: get a Leveled Permutree (bijection)
- ▶ Remove the levels: get a Permutree (surjection)

Example

$\oplus^n$	$\longleftrightarrow$	permutations of $[n]$
$\ominus^n$	$\longleftrightarrow$	standard binary search trees
$\{\ominus, \otimes\}^n$	$\longleftrightarrow$	Cambrian trees (Reading)
$\otimes^n$	$\longleftrightarrow$	binary sequences

The Permutree insertion

Permutation: 2751346

Decoration: $\ominus \oplus \ominus \otimes \ominus \oplus \oplus$

The Permutree insertion

Decorated permutation: $\overline{2} \overline{7} \underline{5} \underline{1} \overline{3} \underline{4} \overline{6}$

The Permutree insertion

Permutation: 2751346

Decoration: $\oplus \ominus \ominus \otimes \ominus \oplus \ominus$

Decorated permutation: $\overline{2} \overline{7} \underline{5} \underline{1} \underline{3} \underline{4} \underline{6}$

The Permutree insertion

Permutation: 2751346

Decoration: $\oplus \ominus \ominus \otimes \ominus \oplus \ominus$

Decorated permutation: $\overline{2} \overline{7} 5 \underline{1} 3 \underline{4} \overline{6}$

The Permutree insertion

Permutation: 2751346

Decoration: $\oplus \ominus \ominus \otimes \ominus \oplus \ominus$

Decorated permutation: $\overline{2} \overline{7} \underline{5} \underline{1} \underline{3} \underline{4} \underline{6}$

The Permutree insertion

Permutation: 2751346

Decoration: $\oplus \ominus \ominus \otimes \ominus \oplus \oplus$

Decorated permutation: $\overline{2} \overline{7} \underline{5} \underline{1} \underline{3} \underline{4} \underline{6}$

The Permutree insertion

Permutation: 2751346

Decoration: $\oplus \ominus \ominus \otimes \ominus \oplus \oplus$

Decorated permutation: $\overline{2} \overline{7} \underline{5} \underline{1} \overline{3} \underline{4} \underline{6}$

Insertion

$$\begin{aligned}\mathfrak{S}_n \times \{\oplus, \oslash, \otimes, \boxtimes\}^n &\longrightarrow \text{Permutrees} \\ (\sigma, \delta) &\longrightarrow \mathbf{P}_\delta(\sigma)\end{aligned}$$

Property

$$\sigma \equiv_\delta \tau \Leftrightarrow \mathbf{P}_\delta(\sigma) = \mathbf{P}_\delta(\tau)$$

Insertion

$$\begin{aligned}\mathfrak{S}_n \times \{\circlearrowleft, \circlearrowright, \circlearrowup, \circlearrowdown\}^n &\longrightarrow \text{Permutrees} \\ (\sigma, \delta) &\longrightarrow \mathbf{P}_\delta(\sigma)\end{aligned}$$

Property

$$\sigma \equiv_\delta \tau \Leftrightarrow \mathbf{P}_\delta(\sigma) = \mathbf{P}_\delta(\tau)$$

Congruence

$$\dots ac \dots \underline{b} \dots \equiv_\delta \dots ca \dots \underline{b} \dots \quad (\delta_b \in \{\circlearrowright, \circlearrowdown\})$$

$$\dots \overline{b} \dots ac \dots \equiv_\delta \dots \overline{b} \dots ca \dots \quad (\delta_b \in \{\circlearrowup, \circlearrowdown\})$$

Decoration: $\textcircled{1}\textcircled{1}\textcircled{2}\textcircled{2}$

$\overline{3}214 \equiv \overline{3}241 \equiv \overline{3}421$

$\overline{2}314 \equiv \overline{2}341$

$\overline{3}124 \equiv \overline{3}142 \equiv \overline{3}412$

$\overline{1}324 \equiv \overline{1}342$

Classical patterns

Example: bca $a < b < c$

(some) permutations containing bca : 4**231**, **2341**, **2413**, **3421**

Classical patterns

Example: bca $a < b < c$

(some) permutations containing bca : 4231, 2341, 2413, 3421

Permutree patterns

We fix the value of b

All size 4 permutations containing $3ca$: 3421, 3241, 2341, 3142, 3412, 1342

Minimal permutations:

Decoration	avoided pattern
	$ca2$ $a < 2 < c$
	$2ca$ $a < 2 < c$
	$ca3$ $a < 3 < c$
	$3ca$ $a < 3 < c$

But what about “sorting”?

Can we find a “sorting” algorithm that selects the minimal permutation (like for stack sorting)?

Why do we want that?

We want an algorithm based on the reduced word to generalize it to other types.

Coxeter group

A group generated by some operators (s_i) such that:

$$(s_i s_j)^{m_{ij}} = Id$$

The weak order lattice as well as the permutree congruences can be defined on all finite Coxeter groups but we don't have the combinatorial interpretation and the pattern avoidance rule.

Cambrian lattices

→ N. Reading. Cambrian lattices. *Advances in Mathematics* (2006)

Cambrian congruences correspond to a special case of Permutree decoration $\{\oplus, \otimes\}$. The c -sorting algorithm described by Reading works in all types.

Permutree sorting: Oriented edges

Permutree decorations correspond to “partial edge orientations” of the Coxeter graph

	$1 \longrightarrow 2 \text{ --- } 3$
	$1 \longleftarrow 2 \text{ --- } 3$
	$1 \text{ --- } 2 \longrightarrow 3$
	$1 \text{ --- } 2 \longleftarrow 3$
	$1 \longleftrightarrow 2 \longleftarrow 3$

Permutree sorting: Oriented edges

The orientation translates into rules on the reduced word

$1 \leftarrow 2 \text{ --- } 3$ s_2 needs to be applied before s_1
and then s_3 needs to be applied before s_2 .

Automaton

This translates into an automaton

Theorem (Pilaud, P., Tamayo)

A permutation is minimal in its Permutree class if at least one of its reduced words is accepted by the automaton.

Example

$\odot \odot \odot \odot$ $1 \leftarrow 2 \text{ --- } 3$ selecting permutations avoiding $2ca$
