About: Authentification

- The EUGLOH App needs an Authentification Service
- 200000 Students – impossible to verify the identifications by hand
 - For inscription into modules
 - For proposals of modules ...
 - ...

About: Authentification

- Idea : Can we do Authentification inside an App via the official services of EUGLOH
 - ADONIS
<https://adonis.u-psud.fr/utilisateur/index.php>
 - Implementing LDAP and LDAP-S (resticted to intra-net)
 - CAS
<https://sso.u-psud.fr/cas/login>

System Development

- Appeal the CAS Server:

Enter Username & Password

Username:

Password:

For security reasons, please [log out](#) and exit your web browser when you are done accessing services

- ... after authentication:

System Development

- ... after authentication (and one more click):)

université
PARIS-SACLAY

Central Authentication

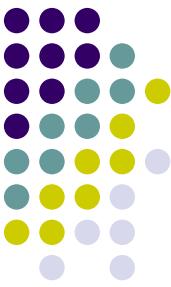

Log In Successful

You, Burkhart.Wolff@universite-paris-saclay.fr, have successfully logged into the Central Authentication Service. However, you are seeing this page because CAS does not know about your target destination and how to get you there. Examine the authentication request again and make sure a target service/application that is authorized and registered with CAS is specified.

When you are finished, for security reasons, please [log out](#) and exit your web browser.

Attribute	Value(s)	Type
cn	[Wolff Burkhart]	Principal
departmentNumber	[933, 92, 2211, 2359, 2357, 2217, 3201, 2289, 2208, 6923, 6920, 6924, 11150, 11148, 12202]	Principal
displayName	[Burkhart Wolff]	Principal
eduPersonAffiliation	[teacher, employee, faculty, member, researcher]	Principal
eduPersonPrimaryAffiliation	[teacher]	Principal
eduPersonPrincipalName	[burkhart.wolff@u-psud.fr]	Principal

System Development

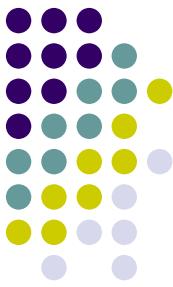

- The CAS Server «tunnels» to LDAP and the ADONIS-Service of Paris-Sud.
- How to contact it:
 - Two possibilities :
 - The SAML Protocol
(use it like google or FaceBook authentification via the CALL Of a WebBrowser from your APP)
 - Directly via the https protocol:
`curl https://sso.u-psud.fr/cas/login > Centr.html ...`
 - ... but this is technically challenging

System Development

- How to subscribe to a Module
- ... send a mail to a (configurable) mail address (can be me) with the subject
- TEST EUGLOH APP + some string
- The registration works via the html presentation of:

	A	B	C	D	E	F	G	H
1	Name	First Name	University	Inscription Date	Matrikel	Role		
2	WOLFF	Burkhart	UPSac	01/01/21		[student,teacher, employee, faculty, member, researcher,euglohadm]		
3								
4								
5								

System Development

- Pour tester, je vous conseille de faire un fichier similaire sur une machine à votre disposition.
Donc Inscription Date doit avoir ce format. Role une sous-liste de celle mentionnée, et le statut soit ACCEPT ou REJECT. Matrikel (no étudiant) peut être vide.
Si le nom d'un étudiant/participant n'est pas encore mentionné dans la liste, le statut n'est pas (encore) établi. Il n'y a pas de notifications pour faire simple ...

Frameworks (iOS & Android)

- FireBase

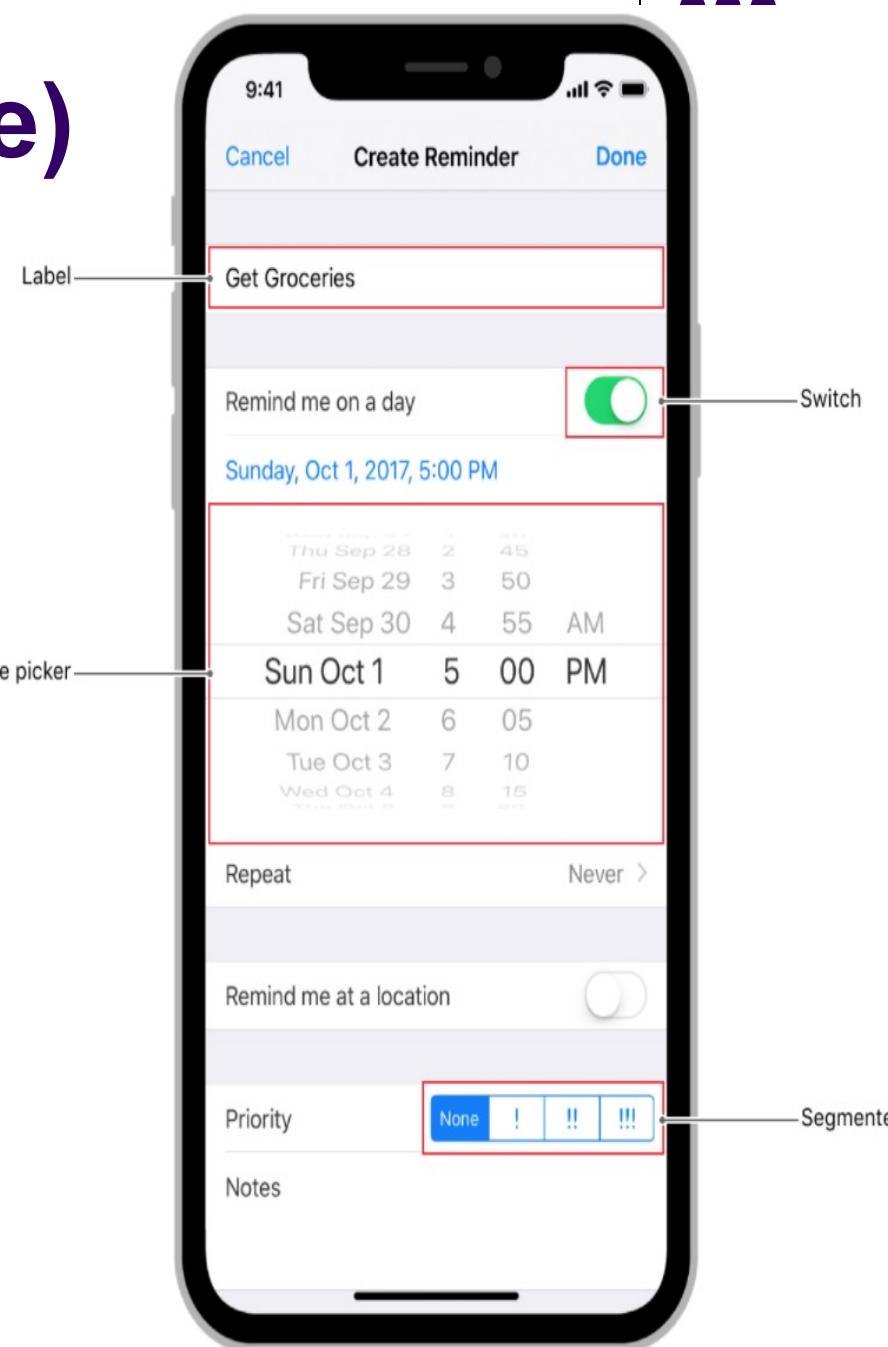

Development Platform for Mobile Apps
providing an Software vDevelopment Kit (SDK)
[Providing Testing, Indexing, Authentification, In-App
Messaging, ML Kit, Realtime Database]

Taken over by google, partially costing money.
Integrated into the Google Cloud Project infrastructure

<https://firebase.google.com/docs/auth>
(for authentifications wrt. Google/Twitter/...)

Frameworks (Apple)

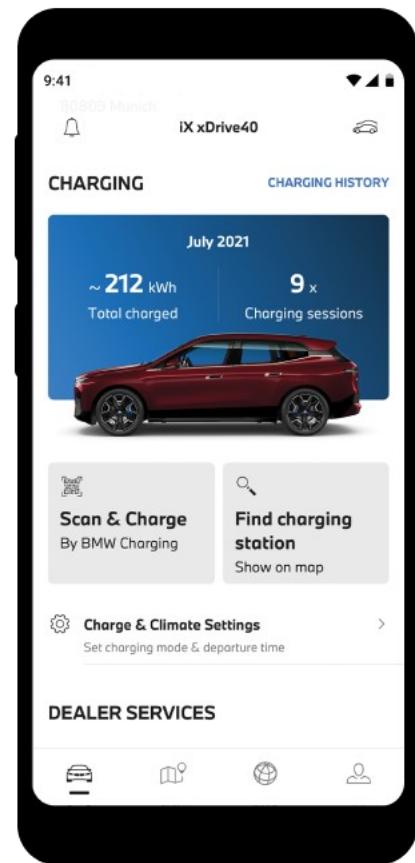

- **UIKit**
Construction and management of graphical, event-driven user-interfaces.
Views and controls are the visual building blocks of your app's user interface.
- **UIView** is the root class for all views and defines their common behavior.
- **UIControl** defines additional behaviors that are specific to buttons, switches, and other views designed for user interactions.

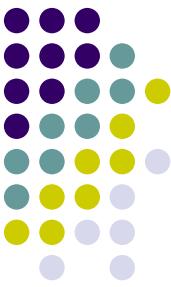

Frameworks (neutral)

- **Flutter**
open source framework by Google`
multi-platform applications from a
single codebase
- Targets iOS, Android, web-services
»Do more with less»
- Internally written in C++, programmed
in an own programming language Dart
([en.wikipedia.org/wiki/Dart_\(programming_language\)](https://en.wikipedia.org/wiki/Dart_(programming_language)))
- Support in IntelliJ IDEA, Android Studio,
Visual Studio Code, Emacs

Component

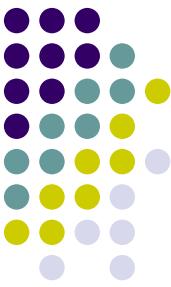

- Bibliothèque LDAP (une solution spéciale)

ldapjs is a pure JavaScript, from-scratch framework for implementing LDAP clients and servers in Node.js. It is intended for developers used to interacting with HTTP services in node and restify.

<http://ldapjs.org>

- Sous LDAP JS on peut faire une requête comme:

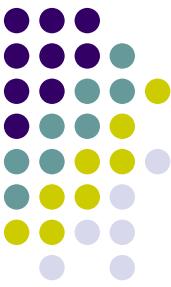

```
ldapsearch -x -D "uid=user_name_ecampus,ou=people,dc=u-psud,dc=fr" -w  
mot_de_passe_ecampus -H ldaps://ldaps.u-psud.fr -b "ou=people,dc=u-psud,dc=fr"  
-s one "uid=user_name_ecampus"
```

Component

- Parser html to DOM : jsoup. (written in JAVA)
 - scrape and parse HTML from a URL, file, or string
 - find and extract data, using DOM traversal or CSS selectors
 - manipulate the HTML elements, attributes, and text
 - clean user-submitted content against a safelist, to prevent XSS attacks
 - output tidy HTML
- Example:

```
Document doc =
Jsoup.connect("https://en.wikipedia.org/").get();
log(doc.title());
Elements newsHeadlines = doc.select("#mp-itn b a");
for (Element headline : newsHeadlines) {
    log("%s\n\t%s",
        headline.attr("title"), headline.absUrl("href"));
}
```

Component

- Android DOM (implemented in Kotlin)

parser is a program that parses an XML document and extracts the required information from it. This parser uses an object-based approach for creating and parsing the XML files. In General, a DOM parser loads the XML file into the Android memory to parse the XML document.

[https://www.geeksforgeeks.org/xml-parsing-in-android-using-dom-parser/#:~:text=Android%20DOM\(Document%20Object%20Model,to%20parse%20the%20XML%20document.](https://www.geeksforgeeks.org/xml-parsing-in-android-using-dom-parser/#:~:text=Android%20DOM(Document%20Object%20Model,to%20parse%20the%20XML%20document.)
